Floatless Level Switch (Basic Type)
61F-G□

CSM_61F-G__DS_E_4_5

Basic Building-block Controllers That Mount Directly to Panels for Easier Maintenance

- Easy maintenance with building-block Relay Units.
- Easy identification of operating status with LED operation indicator.
- Lineup includes models for tropical regions and for high temperatures. Achieve stable detection even in high-temperature environments.

⚠ **Refer to *Safety Precautions for Floatless Level Controllers*.**

Some specifications for 61F-G□ Series products in this catalog have been discontinued at the end of March 2018.

Model Number Structure

61F-□□
1 2

1. Control Application
- G: Automatic water supply and drainage
- G1: Automatic water supply with idling prevention or water shortage alarm
- G2: Automatic water supply and drainage with abnormal water increase alarm
- G3: Automatic water supply and drainage with full tank and water shortage alarm
- G4: Automatic water supply with water level indicator for water supply tank and water receiving tank and prevention of idling due to water shortage
- I: Liquid level indication and alarm (no two-wire models)

2. Type
- Blank: General-purpose
- L 2KM: Long-distance (for 2 km)
- L 4KM: Long-distance (for 4 km)
- H: High-sensitivity
- D: Low-sensitivity
- R: Two-wire
- T: High-temperature

Position of LED indicator

Note: 1. When ordering, specify the desired operating voltage at the end of the model number.

Example: 61F-G [110/220 VAC]

└──── Desired supply voltage

2. If you order with a standard model number, the corresponding Relay Units are also delivered as part of a set.
If you order the 61F-G, one 61F-11 Relay Unit is included in the set.

✻ Orders will not be accepted after March 31, 2018. Refer to the following table for the discontinued power supply voltages.

Discontinued at the end of March 2018

61F-G	G	G1	G2	G3	G4	I

Specifications

■Standard Models

Specifications

Items	General-purpose Controller 61F-□ (TDL) (see note 1 and 2)	High-temperature Controller 61F-□T (see note 1)	Long-distance Controllers 61F-□L 2KM (for 2 km) 61F-□L 4KM (for 4 km) (see note 1)	High-sensitivity Controllers 61F-□H (see note 1)	Low-sensitivity Controller 61F-□D (see note 1)	Two-wire Controller 61F-□R (see note 1)
Controlling materials and operating conditions	For control of ordinary purified water or sewage water	For control of ordinary purified water or sewage water in cases where the ambient temperature is high.	For control of ordinary purified water in cases where the distance between sewage pumps and water tanks or between receiver tanks and supply tanks is long or where remote control is required.	For control of liquids with high specific resistance such as distilled water	For control of liquids with low specific resistance such as salt water, sewage water, acid chemicals, alkali chemicals	For control of ordinary purified water or sewage water used in combination with Two-wire Electrode Holder (incorporating a resistor of 6.8 kΩ) It is possible to wire with less than one wiring against general 61F's wiring.
Supply voltage	100, 110, 120, 200, 220 or 240 VAC; 50/60 Hz					
Operating voltage range	85% to 110% of rated voltage					
InterElectrode voltage	8 VAC			24 VAC	8 VAC	
InterElectrode current	Approx. 1 mA AC max.					
Power consumption	61F-G□: 3.5 VA max.; G1F-G1□, G1F-G2□, or G1F-I□: 5.5 VA max.; G1F-G3□: 7.5 VA max.; G1F-G4□: 14.5 VA max.					
InterElectrode operate resistance	0 to approx. 4 kΩ	0 to approx. 5 kΩ	0 to approx. 1.8 kΩ (for 2 km) 0 to approx. 0.7 kΩ (for 4 km)	Approx. 15 kΩ to 70 kΩ (see note 5)	0 to approx. 1.8 kΩ	0 to approx. 1.1 kΩ
InterElectrode release resistance	Approx. 15 k to ∞ Ω	Approx. 15 k to ∞ Ω	4 k to ∞ Ω (for 2 km) 2.5 k to ∞ Ω (for 4 km)	Approx. 300 k to ∞ Ω	Approx. 5 k to ∞ Ω	Approx. 15 k to ∞ Ω
Cable length (see note 3)	1 km max.	600 m max.	2 km max. 4 km max.	50 m max.	1 km max.	800 m max.
Control output	2 A, 220 VAC (Inductive load: cosϕ = 0.4) 5 A, 220 VAC (Resistive load)					
Ambient temperature	Operating: –10 to 55°C (–10 to 70°C for 61F-□T)					
Ambient humidity	Operating: 45% to 85% RH					
Insulation resistance (see note 4)	100 MΩ min. (at 500 VDC)					
Dielectric strength (see note 4)	2000 VAC, 50/60 Hz for 1 min.					
Life expectancy	Electrical: 500,000 operations min. Mechanical: 5,000,000 operations min.					
Weight	61F-G□: Approx. 380 g, G1F-G1□, G1F-G2□, or G1F-I□: Approx. 750 g; G1F-G3□: Approx. 930 g; G1F-G4□: Approx. 1,710 g					

Note: 1. The □ in the model name represents G, G1, G2, G3, G4, and I.

2. The suffix "TDL" attached to the model name represents models designed for tropical regions (storage humidity of 45% to 90%). For details, refer to *Safety Precautions for Floatless Level Controllers*.

3. The length when using completely-insulated, 600-V, 3-conductor (0.75 mm^2) cabtire cables. Usable cable lengths will become shorter as the cable diameter or number of conductors becomes larger. For details, refer to *Safety Precautions for Floatless Level Controllers*.

4. The insulation resistance and dielectric strength indicate values between power terminals and Electrode terminals, between power terminals and contact terminals, and between Electrode terminals and contact terminals.

5. Possible to use with 15 kΩ or less, however, this may cause reset failure.

6. High-sensitivity Controllers use advanced operation.
When the power supply voltage is applied, if there are some liquids between the electrodes (ground and operation electrodes), the internal relay will not operate.
When the power supply voltage is applied, if there are no liquids between the electrodes (ground and operation electrodes), the internal relay will operate.

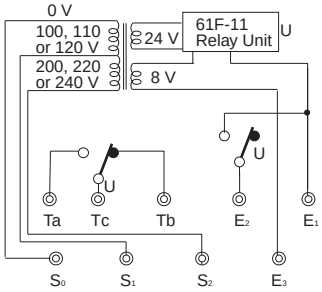
• Advanced Operation

With advanced operation, the internal relay operates as soon as control power is supplied to the G1F and is reset when current flows between the poles. Wiring is the same as for models with sequential operation.

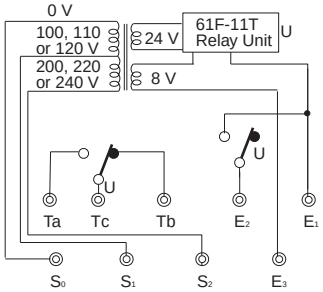
Internal Circuit Diagrams

The schematic diagrams shown below typify the internal connections of the various 61F models. The designations Ta, Tb, and Tc (sometimes referred to collectively as “U”) may occur more than once in a product, however, the “a” terminal is always an NO contact, a “b” terminal is an NC contact, and the “c” terminal is the common terminal.

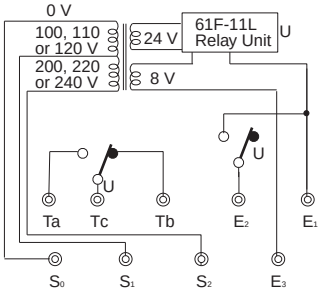
61F-G



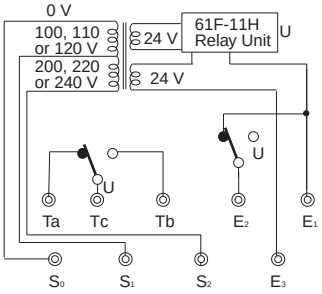
61F-GT



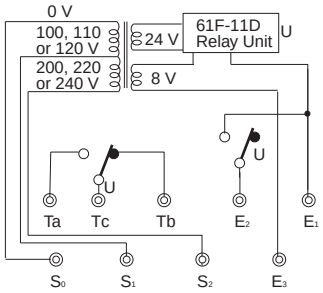
61F-GL



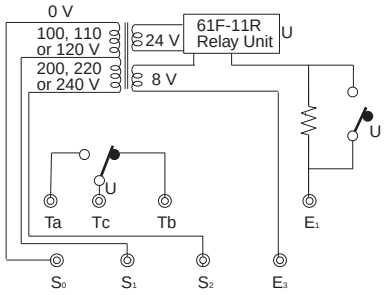
61F-GH (See note.)



61F-GD



61F-GR



Note: The 61F11H relay deenergizes when there is water present across the Electrodes, whereas the 61F relay energizes when there is water present across the Electrodes.
Also, the terminal connections of those Controllers provided with LED indicators differ from those which have no indicators.

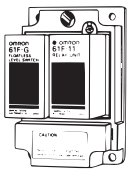
■Connections

Automatic Water Supply and Drainage Control

Basic Type

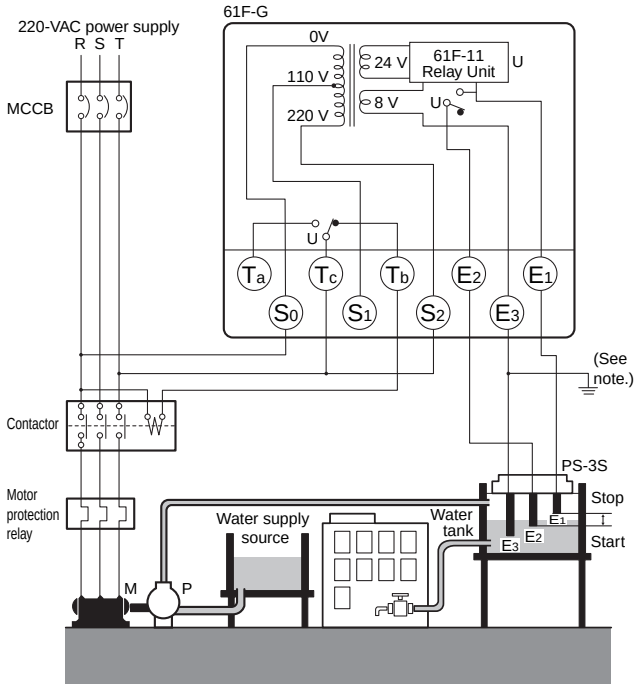
61F-G

Dimensions: page 14



Automatic Water Supply Control

Connections

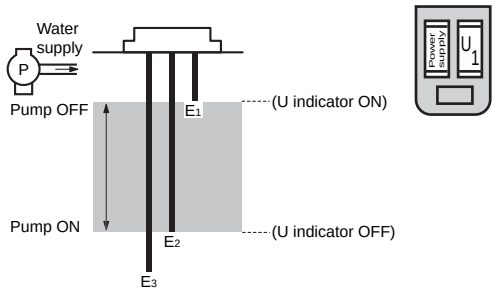


Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Tb to the contactor's coil terminal.
- Power Supply Connections (for models with 110/220-V power)
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.

Principles of Operation

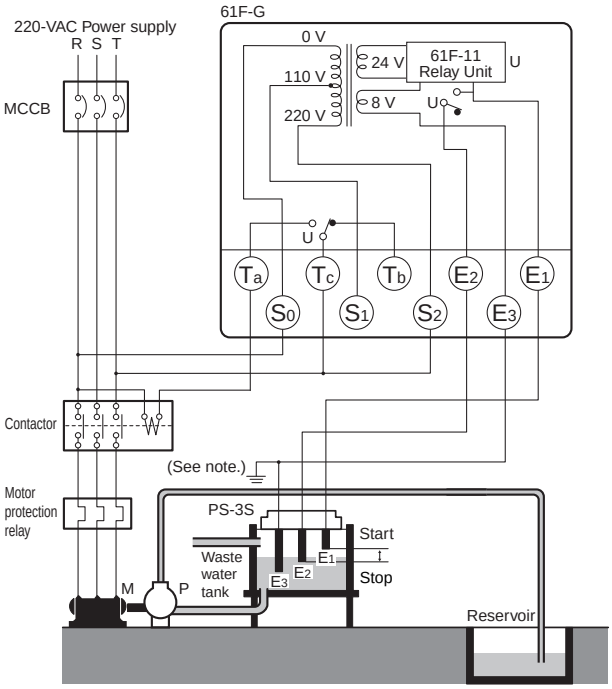
Relay Unit Location



The pump stops (indicator ON) when the water level reaches E_1 and starts (indicator OFF) when the water level drops below E_2.

Automatic Drainage Control

Connections

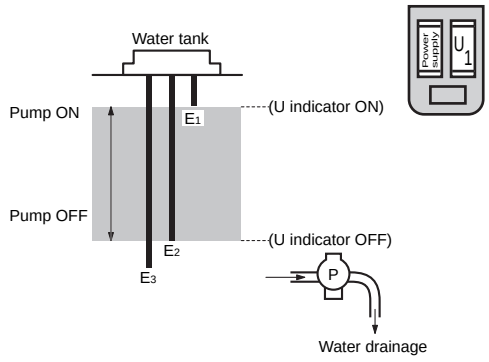


Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Ta to the contactor's coil terminal. (Do not connect Tb.)
- Power Supply Connections (for models with 110/220-V power)
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.

Principles of Operation

Relay Unit Location

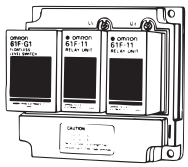


The pump starts (indicator ON) when the water level reaches E_1 and stops (indicator OFF) when the water level drops below E_2.

Automatic Water Supply Control with Pump Idling Prevention and Automatic Water Supply Control with Abnormal Water Shortage Alarm

Basic Type

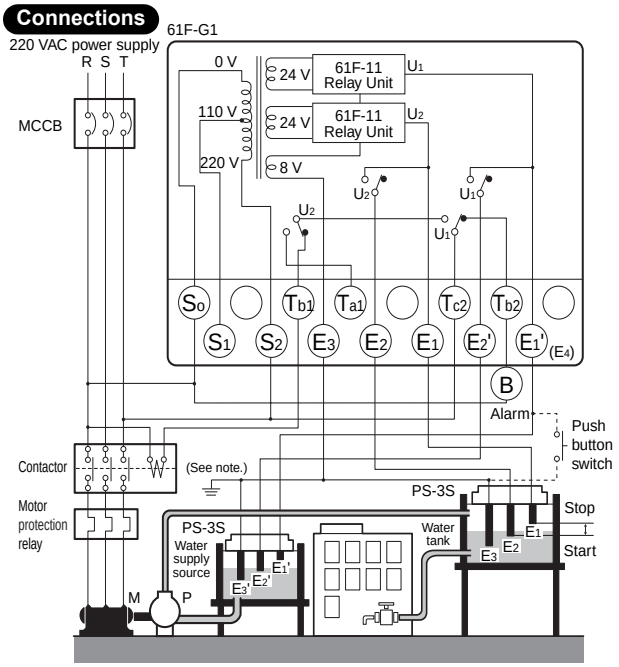
61F-G1



Dimensions: page 14

Automatic Water Supply Control with Pump Idling Prevention

Connections



Note: Be sure to ground the common Electrode (the longest Electrode).

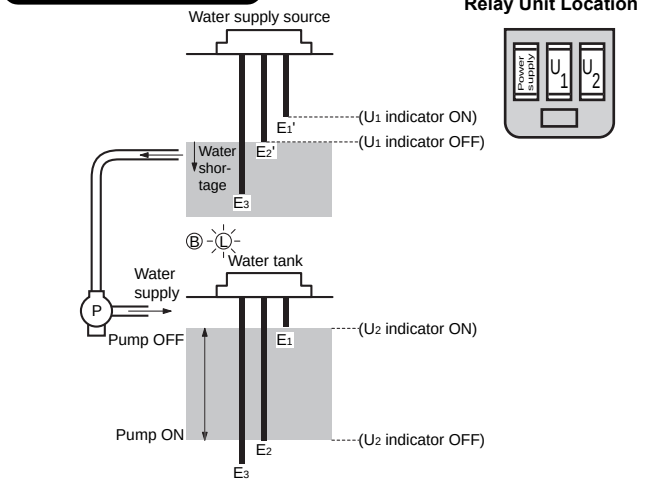
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.
- Insert a pushbutton switch (NO) between E_1' and E_3, as shown by the dotted lines above.
- Do not press the pushbutton if the low-water alarm sounds and the pump stops during normal operation (U_1 indicator ON, water below E_2').

Test Operation/Recovering from Power Interruptions

If the supply water level is below E_1' when starting operation or when recovering from a power interruption, press the pushbutton to momentarily close the circuit (U_1 indicator turns ON) to start the pump.

Principles of Operation

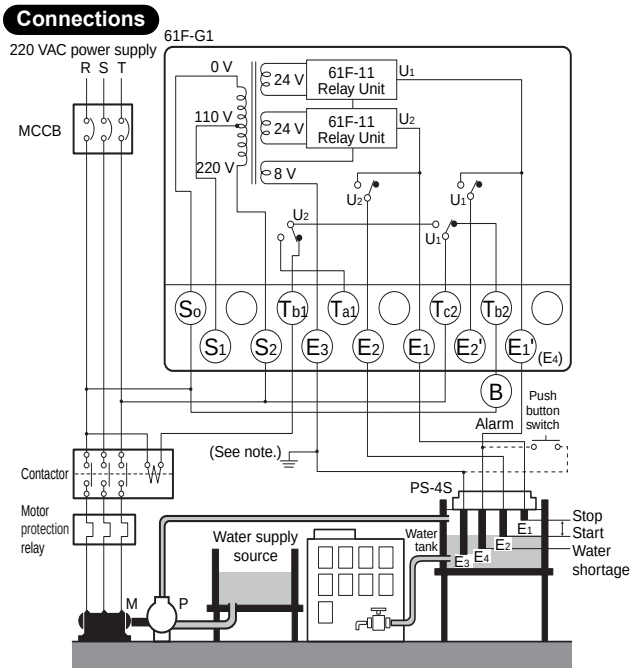
Relay Unit Location



- The pump starts (U_2 indicator OFF) when the water level drops below E_2 and stops (U_2 indicator ON) when the water level reaches E_1.
- When the level of the water supply source drops below E_2', the pump stops (U_1 indicator OFF). Pump idling is prevented and the alarm sounds.

Automatic Water Supply Control with Abnormal Water Shortage Alarm

Connections



Note: Be sure to ground the common Electrode (the longest Electrode).

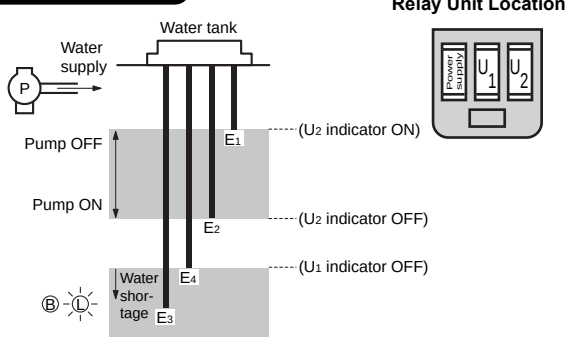
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.
- Insert a pushbutton switch (NO) between E_3 and E_4.
- If the pump stops when the pushbutton switch is released, press it again.

Test Operation/Recovering from Power Interruptions

If the supply water level is below E_4 when starting operation or when recovering from a power interruption, press the pushbutton to momentarily close the circuit (U_1 indicator turns ON) to start the pump.

Principles of Operation

Relay Unit Location



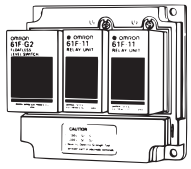
- The pump stops (U_2 indicator ON) when the water level reaches E_1 and starts (U_2 indicator OFF) when the water level drops below E_2.
- If the water level drops below E_4 for any reason, the pump stops (U_1 indicator OFF) and the alarm sounds.

Automatic Drainage Control and Water Supply with Abnormal Water Increase Alarm

Basic Type

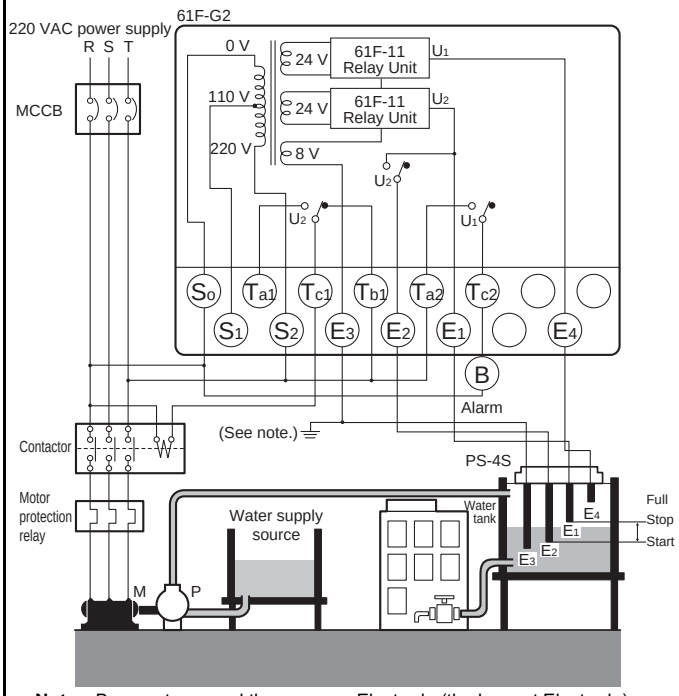
61F-G2

Dimensions: page 14



Automatic Water Supply with Overfull Tank Alarm

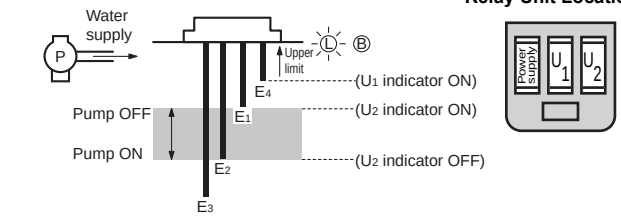
Connections



Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Tb_1 to the power supply.
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.

Principles of Operation

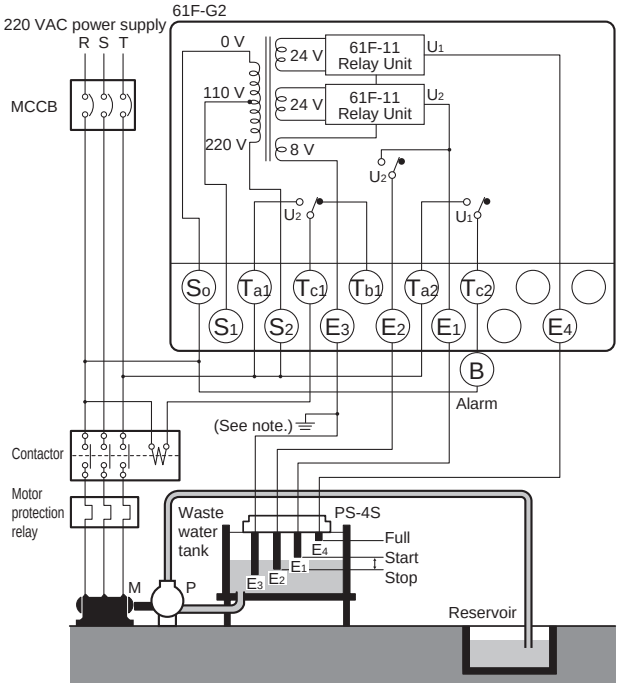


Relay Unit Location

- The pump starts (U_2 indicator OFF) when the water level drops below E_2 and starts (U_2 indicator ON) when the water level reaches E_1.
- If the water level reaches E_4 for any reason, the alarm sounds (U_1 indicator ON).

Automatic Drainage Control with Overfull Tank Alarm

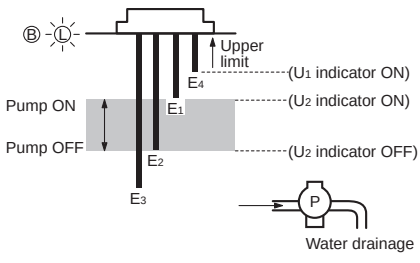
Connections



Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Ta_1 to the power supply.
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.

Principles of Operation



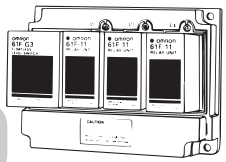
Relay Unit Location

- The pump starts (U_2 indicator OFF) when the water level reaches E_1 and stops (U_2 indicator ON) when the water level drops below E_2.
- If the water level reaches E_4 for any reason, the alarm sounds (U_1 indicator ON).

Automatic Water Supply and Drainage Control with Abnormal Water Increase and Water Shortage Alarms

Basic Type

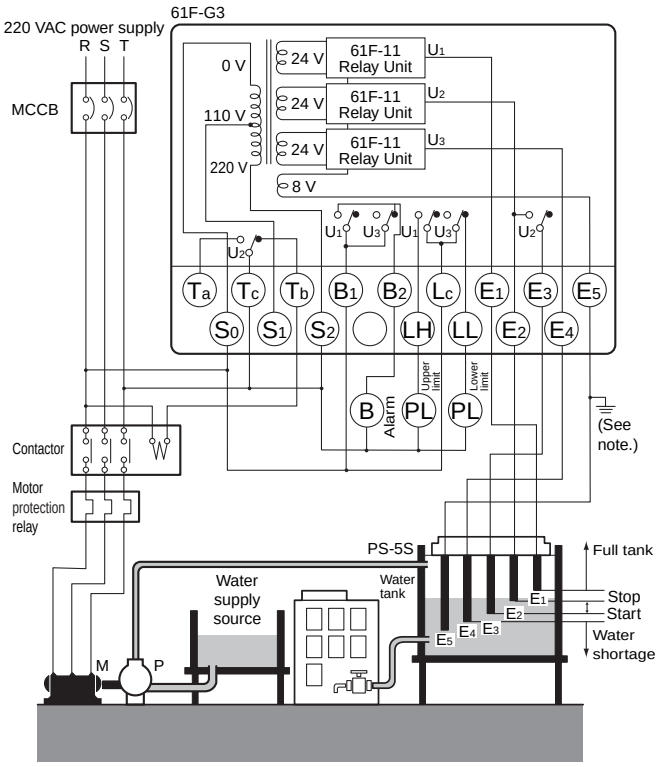
61F-G3



Dimensions: page 14

Automatic Water Supply with Abnormal Water Increase and Water Shortage Alarms

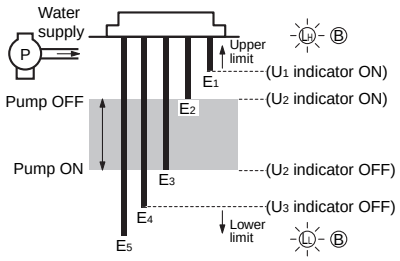
Connections



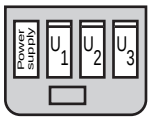
Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Tb to the contactor's coil terminal.
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.

Principles of Operation



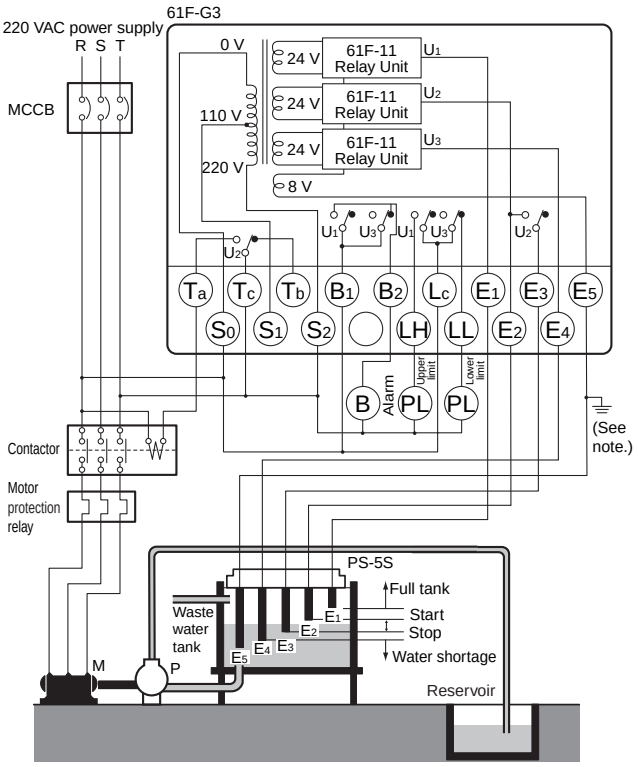
Relay Unit Locations



- The pump stops (U_2 indicator ON) when the water level reaches E_2 and starts (U_2 indicator OFF) when the water level drops below E_3.
- If the water level rises to E_1 for any reason, the upper-limit indicator turns ON and the alarm sounds (U_1 indicator ON). If the water level drops below E_4 for any reason, the lower-limit indicator turns ON and the alarm sounds (U_3 indicator OFF).

Automatic Drainage Control with Abnormal Water Increase and Water Shortage Alarms

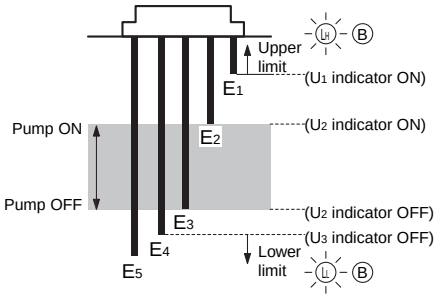
Connections



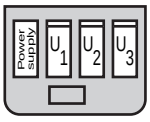
Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Ta to the contactor's coil terminal. (Do not connect Tb.)
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.

Principles of Operation



Relay Unit Locations



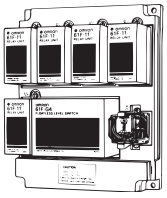
- The pump starts (U_2 indicator ON) when the water level reaches E_2 and stops (U_2 indicator OFF) when the water level drops below E_3.
- If the water level rises to E_1 for any reason, the upper-limit indicator turns ON and the alarm sounds (U_1 indicator ON). If the water level drops below E_4 for any reason, the lower-limit indicator turns ON and the alarm sounds (U_3 indicator OFF).

Automatic Water Supply Control with Water Source Level Indication, Prevention of Pump Idling Due to Water Shortage, and Indication of Water Level in Tank

Basic Type

61F-G4

Dimensions: page 14



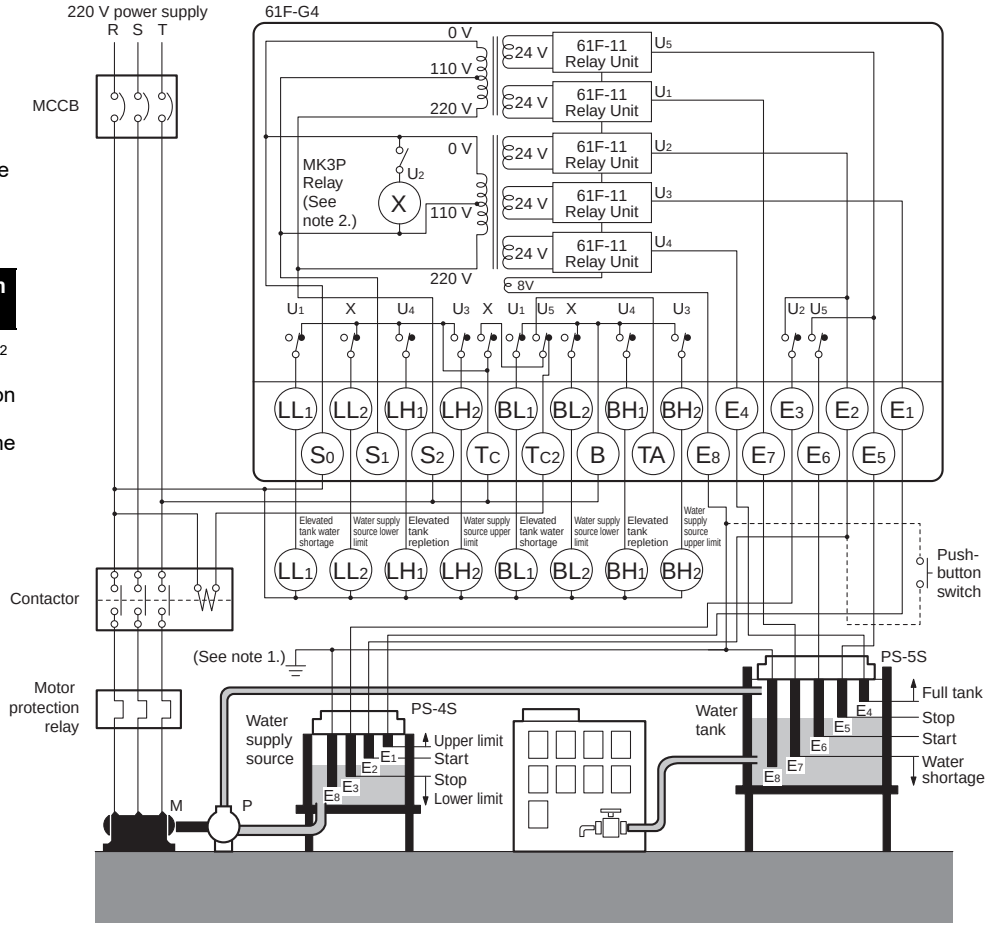
Automatic Water Supply Control with Water Source Level Indication, Prevention of Pump Idling Due to Water Shortage, and Indication of Water Level in Tank

Connections

- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.
- Insert a pushbutton switch (NO) between E_2 and E_8, as shown by the dotted lines above.
- Do not press the pushbutton if the low-water alarm sounds and the pump stops during normal operation (water below E_3).

Test Operation/Recovering from Power Interruptions

If the supply water level is below E_2 when starting operation or when recovering from a power interruption (U_2 indicator OFF), press the pushbutton to momentarily close the circuit to start the pump.

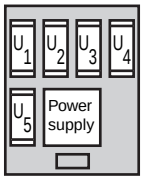


Note: Be sure to ground the common Electrode (the longest Electrode).

Principles of Operation

- Insert four Electrodes in the water supply source and five Electrodes in the elevated water tank.
- The lower-limit indicator for the water supply source remains ON while the water source level is below E_3 (U_2 indicator OFF).
- When the water level rises to E_2, the lower-limit indicator turns OFF (U_2 indicator ON) and the pump is ready for operation.
- The upper-limit indicator in the water supply source lights when the water level reaches E_1 (U_3 indicator ON).
- The water-shortage indicator for the elevated tank remains ON while the water level in the elevated tank is below E_7. The indicator turns OFF (U_1 indicator ON) when the water level rises to E_7.
- The pump stops (U_5 indicator ON) when the water level reaches E_5 and starts (U_5 indicator OFF) when the water level drops below E_6.
- If the water level reaches E_4 for any reason, the abnormal water increase indicator for the elevated tank turns ON (U_4 indicator ON).

Relay Unit Location

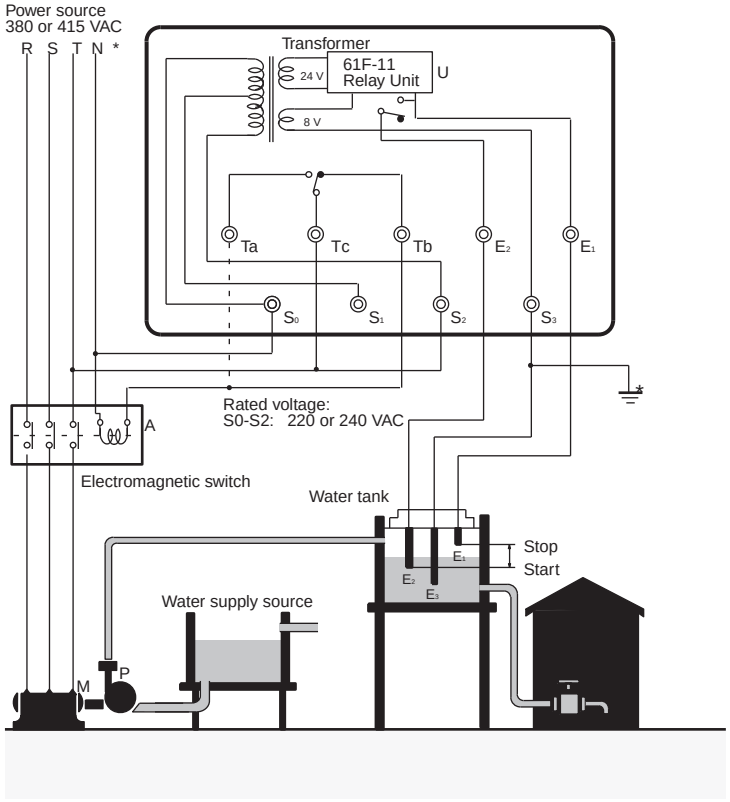


■Connection with Three-phase Four-line Circuit

When supplying power from N-phase to the Controller in three-phase four-line circuit, refer to the following diagrams.
Line voltage (R-S, S-T, or R-T): 380 or 415 VAC
Phase voltage (N-R, N-S, or N-T): 220 or 240 VAC

61F-G□, 220 or 240 VAC

Water Supply



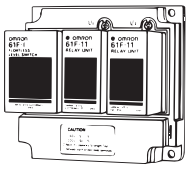
Note: Be sure to ground terminal E3.

Liquid Level Indication and Alarm

Basic Type

61F-I

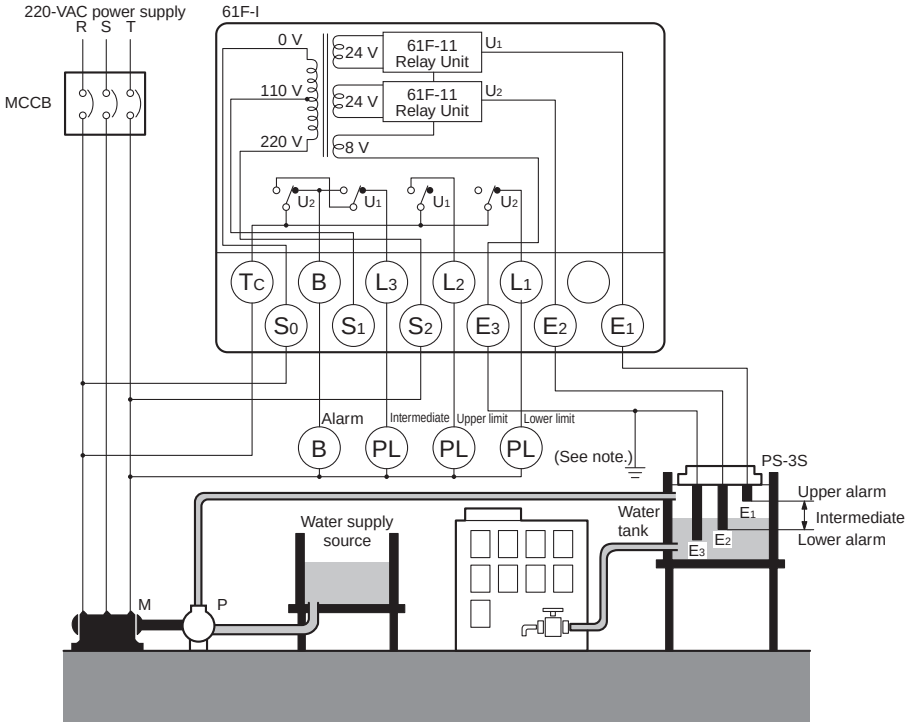
Dimensions: page 14



Liquid Level Indication and Alarm

Connections

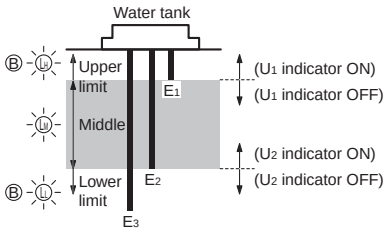
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.



Note: Be sure to ground the common Electrode (the longest Electrode).

Principles of Operation

- When the water level drops below E_2, the lower-limit indicator turns ON and the alarm sounds (U_2 indicator OFF).
- When the water level reaches E_2, the alarm turns OFF and the intermediate indicator turns ON (U_2 indicator ON).
- When the water level rises to E_1, the upper-limit indicator turns ON and the alarm sounds (U_1 indicator ON).



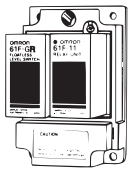
Relay Unit Location

■Two-Wire Connections

Automatic Water Supply and Drainage Control

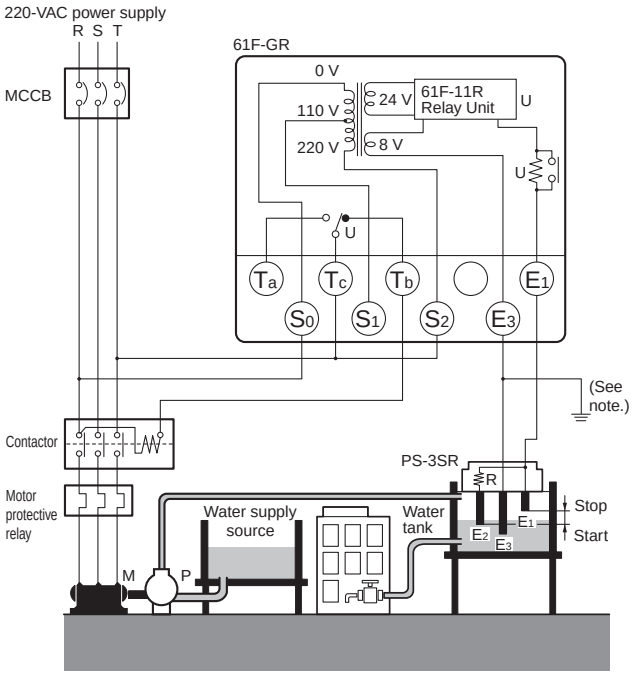
Basic Type

61F-GR



Automatic Water Supply Control

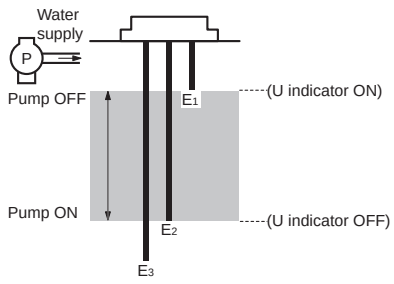
Connections



Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Tb to the contactor's coil terminal.
- Power Supply Connections
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.
- With 2-wire connections, only two wires are required between the 61F-GR and Electrode Holder, but three wires are required for the Electrodes.
- The Electrode Holder must be specified for 2-wire connections. (Resistance R is built into Electrode Holders for 2-Wire Connections.)
- The Relay Unit must also be specified for 2-wire connections.

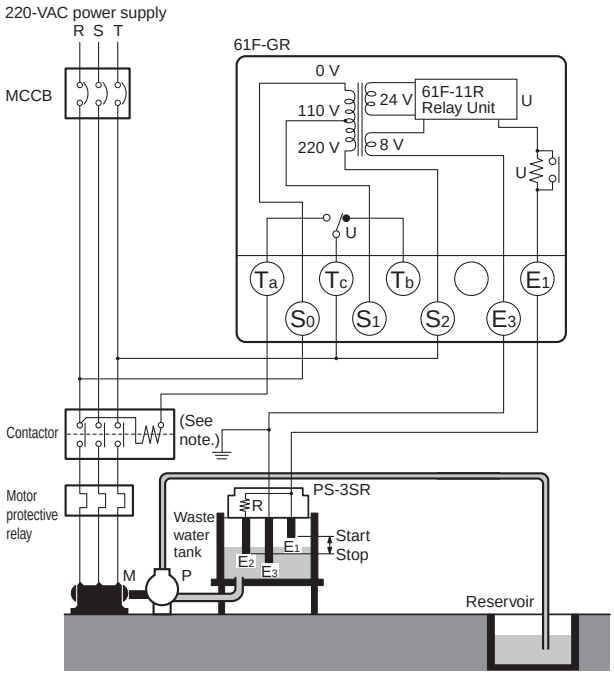
Principles of Operation



The pump stops (U indicator ON) when the water level reaches E_1 and starts (U indicator OFF) when the water level drops below E_2.

Automatic Drainage Control

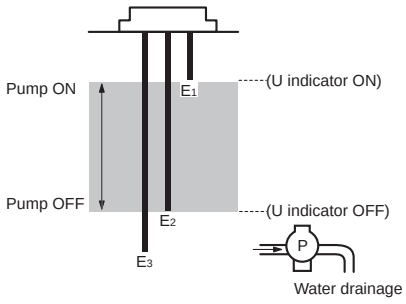
Connections



Note: Be sure to ground the common Electrode (the longest Electrode).

- Connect Ta to the contactor's coil terminal. (Do not connect Tb.)
- Power Supply Connections (for models with 110/220-V power)
  110 VAC: Connect S_0 and S_1.
  220 VAC: Connect S_0 and S_2.
- With 2-wire connections, only two wires are required between the 61F-GR and Electrode Holder, but three wires are required for the Electrodes.
- The Electrode Holder must be specified for 2-wire connections. (Resistance R is built into Electrode Holders for 2-Wire Connections.)
- The Relay Unit must also be specified for 2-wire connections.

Principles of Operation



The pump starts (U indicator ON) when the water level reaches E_1 and stops (U indicator OFF) when the water level drops below E_2.

Dimensions

Note: All units are in millimeters unless otherwise indicated.

Terms and Conditions Agreement

Read and understand this catalog.
Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.
(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE
PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.
Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.
See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.
OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.
Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.
Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.
NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.
Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.
Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.
Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.
Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

2024.12

In the interest of product improvement, specifications are subject to change without notice.
